

Maya & Associates LLC

Maya & Associates took the help of Evonence to manage the migration of their users and data to Google Workspace and also offered Google Workspace skills training and Admin training and continues to provide ongoing technical support.

The challenge

Current Office365 and SharePoint solutions prevented the users with real-time collaboration for real-time document sharing related to accounting and tax activities. Real-time file syncing was one of the major issues. The Customer decided to replace the existing combination of Office 365 and SharePoint based solution with Google workspace for better experience, efficiency, and cloud collaboration

The solution

Maya & Associates employees use Google Workspace to collaborate with each other, teams and customers with emails, files and drives which are accessible internationally. Google Workspace security features allow them to keep their customer data safe and secure without paying for additional third-party security solutions. The client also deals with sensitive information including SSN and bank details

The results

Migrating to Google enterprise plus plan allowed the management team with better data loss prevention, device management for corporate laptops and mobiles devices, and better data breach incident controls. Workspace solution provided end-users with real-time document collaboration resulting in faster delivery of tax and accounting documents to customers and improving customer experience.

“ As a new customer to Google Workspace, we are more than happy with the simplicity of the platform and its use. We have a great experience working with the Evonence team. By far they are one the most professional and experienced teams I have worked with. I really enjoyed working with them and found them very flexible and accommodating to customer needs. ”
