

URBANSPACE REAL ESTATE

Engaged Evonence for workspace tools adoption for better real-time collaboration, data sharing, and security and mobility access needs.

The challenge

The customer was looking for a single platform to address real-time collaboration and data sharing needs to meet the growing business demand and scale. The current solution was limited only to email and was required to use other third-party solutions like File servers without any collaboration for customer-facing real estate agents and team members.

The solution

By moving to Google, they got more than Email. With instant messaging, voice, and video conferencing, remote team members can connect and contribute. Collaborate together in real-time on documents, spreadsheets, and presentations. With Google workspace, employees were empowered to work from anywhere, on virtually any device increasing productivity and efficiency.

The results

Much improved customer experience with the agents having access to the company's real estate data with real-time collaboration. Email, meet, calendar, and cloud storage with enhanced security allowing employees to take advantage of cloud-based productivity tools and reducing the focus on IT Operations.

“ We really enjoyed our migration experience with Evonence. They made the process extremely easy for us and so far we love using google workspace. ”

John Curry, Director of Technology, Urbanspace Real Estate + Interiors

About Urbanspace LLP

Urbanspace Real Estate + Interiors was created out of Kevin Burns' passion for downtown and the urban core of Austin, Texas. Born out of an entrepreneurial vision to develop an on-the-ground real estate firm that could uniquely provide turn-key solutions to the needs of downtown and urban core residents, they have led the way for development
